МАТЕРИАЛЫ НАБЛЮДЕНИЙ
СЕЙСМИЧЕСКОЙ СТАНЦИИ "АПАТИТЫ"

январь-декабрь
1970 г.

Апатиты
1975

ПРЕДИСЛОВИЕ

Материалы наблюдений сейсмической станции "Апатиты" содержат подробные данные о землетрясениях и микросейсмах, зарегистрированных станцией в январе - июне 1970г.

В первой части выпуска - "Бюллетень микротрясений" - сообщаются: 1) время (гринвичское) возникновения землетрясения; 2) времена вступлений различных видов волн и знак их первого смещения; 3) периоды в секундах и амплитуды колебаний почвы в мм записи, приведенные к увеличению 1000; 4) интенсивность землетрясения по шкале М; 5) эпицентриальное расстояние; 6) географическое наименование места землетрясения, географические координаты и глубина очага.

В случаях, когда для определения основных элементов очага зарегистрированного землетрясения данных станции "Апатиты" недостаточно, недостающие сведения об этом землетрясении взяты из "Оперативного бюллетеня сети сейсмических станций СССР".

С мая 1970г. бюллетень составляется по измененной форме. В отдельную графу выделены "Приборы". В этой графе указаны приборы, по которым зарегистрировано вступление волн. Магнитуда землетрясения определяется по объемным и поверхностным волнам для разных типов приборов. Эти данные помещены в отдельной графе.

Во второй части - "Бюллетень микросейсм" - даётся индексовая характеристика микросейсм, приводятся данные о периоде и максимальной амплитуде их для 0, 6, 12, 18 часов по среднему гринвичскому времени, измеренные по вертикальной составляющей.

Во время "бури микросейсм" (когда амплитуда колебаний по вертикальной составляющей превышает 4 микрона) данные о периодах и амплитудах микросейсм приводятся для всех составляющих через каждые 3 часа.

Аппаратура станции: а) трёхкомпонентный комплект сейсмографов общего типа с продлённой характеристикой (модификация Д.П.Кирноса и В.Т.Архангельского); б) трёхкомпонентный комплект длиннопериодных сейсмографов с гальванометрами *ГРУ-4*; в) трёхкомпонентный комплект сейсмографов конструкции Д.А.Харина. г) вертикальный сейсмограф повышенной чувствительности СКМ-3 конструкции Д.П.Кирноса.

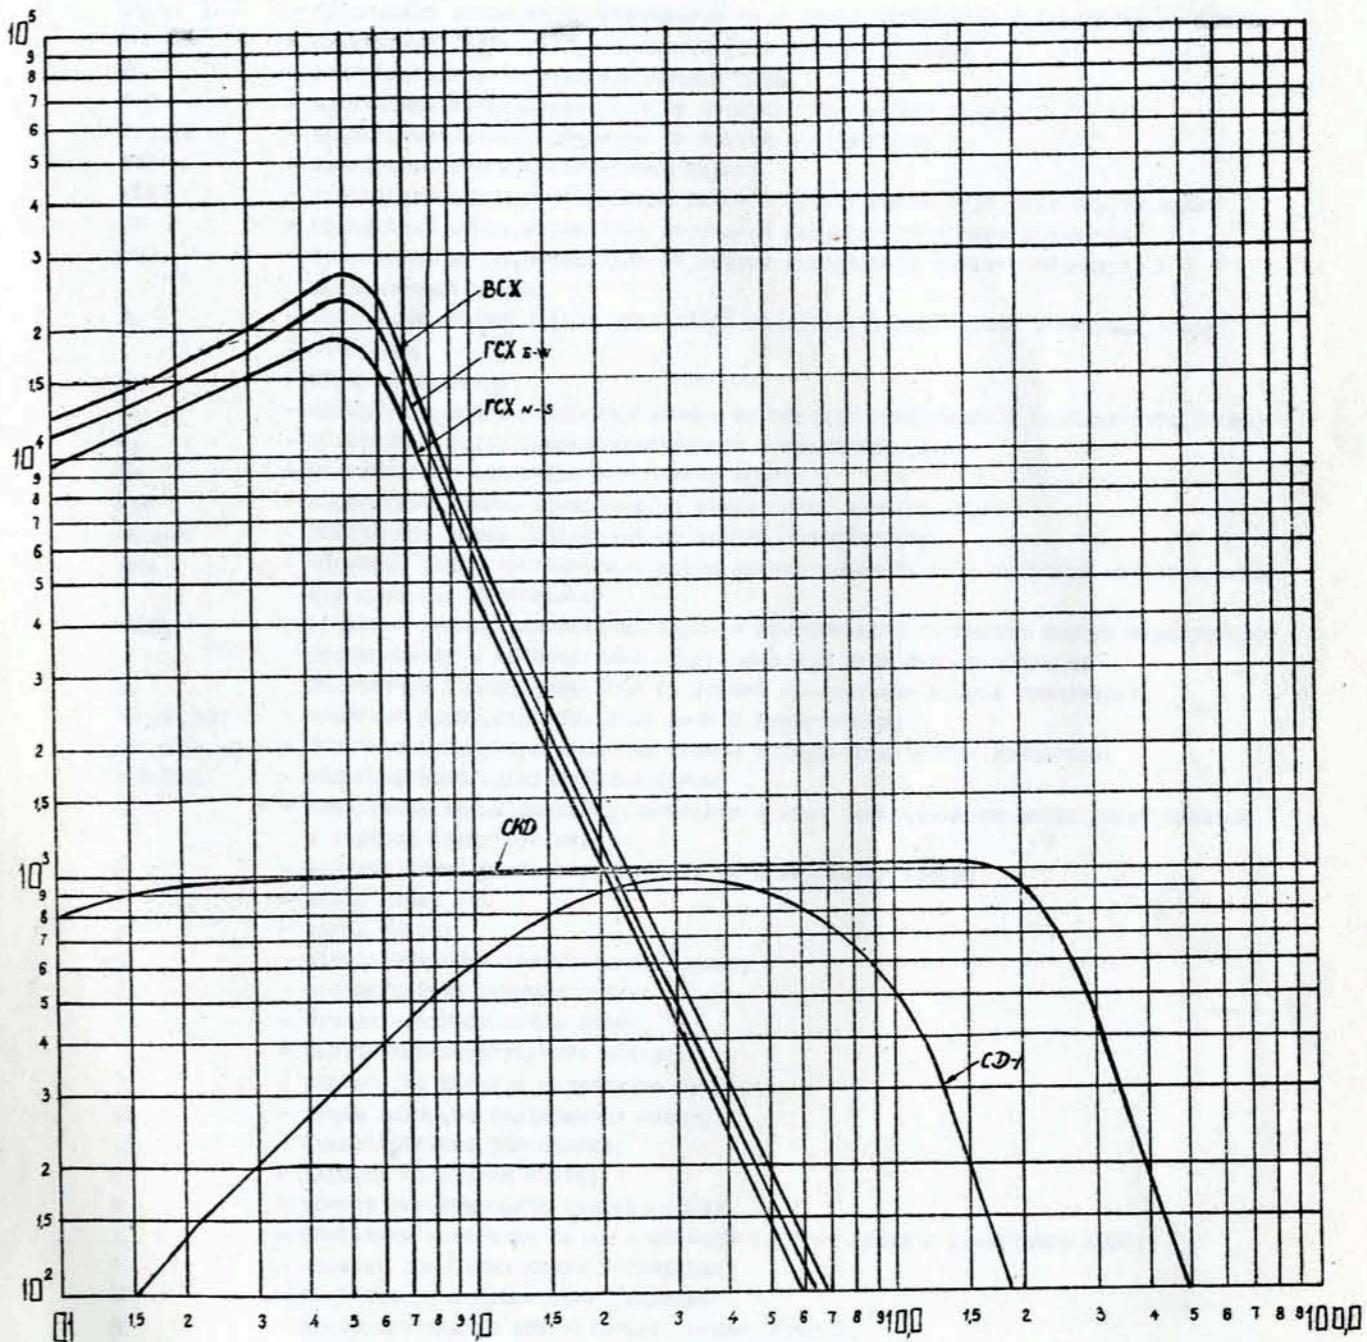

Скорость регистрации: а) на комплекте СКД - 30 мм/мин.; б) на комплекте СД-1 - 15 мм/мин.; в) на комплектах СКМ-3 и СХ - 60 мм/мин.

Постоянные приборов станции "Апатиты".

- 1 - приведенная длина маятника;
- T_b - период собственных колебаний маятника;
- T_g - период собственных колебаний гальванометра;
- T_m - период, при котором увеличение системы сейсмограф-гальванометр достигает максимума;
- D_s - постоянная затухания маятника;
- D_g - постоянная затухания гальванометра;
- коэффициент электрической связи между сейсмографом и гальванометром;
- V_m - увеличение системы сейсмограф-гальванометр для колебаний с периодом T_m .

Адрес станции:
 почтовый - 184200, г.Апатиты мурманской обл.,сейсмическая станция "Апатиты";
 телеграфный - Апатиты Мурманской сейсмостанция;
 телетайп - 68298.

ОБЪЯСНЕНИЕ ОБОЗНАЧЕНИЙ

| | |
|-----------------|--|
| P | - продольные волны; |
| P _b | - продольные волны, дифрагированные на границе гранитного и базальтового слоёв; |
| P _g | - продольные волны, распространяющиеся в гранитном слое; |
| P _m | - максимальная амплитуда продольных волн; |
| P _{cP} | - продольные волны, отраженные от поверхности земного ядра; |
| PP, PPP | - продольные волны, отраженные от земной поверхности; |
| PKP | - продольные волны, преломлённые ядром; |
| PKKP | - продольные волны, преломлённые ядром и претерпевшие отражение внутри ядра; |
| pP | - продольные волны, отраженные от земной поверхности вблизи эпицентра; |
| pPKP | - продольные волны, отраженные от земной поверхности вблизи эпицентра и преломлённые ядром; |
| P _a | - продольные волны в слое пониженной скорости, расположенному в верхних слоях оболочки; |
| S | - поперечные волны; |
| S _b | - поперечные волны, дифрагированные на границе гранитного и базальтового слоёв; |
| S _g | - поперечные волны, распространяющиеся в гранитном слое; |
| S _m | - максимальная амплитуда поперечных волн; |
| ScS | - поперечные волны, отраженные от поверхности земного ядра; |
| SS, SSS | - поперечные волны, отраженные от земной поверхности; |
| SKS | - обменные волны, преломлённые ядром, распространяющиеся в оболочке как поперечные и в ядре как продольные; |
| SKKS | - обменные волны, преломлённые ядром и претерпевшие отражение внутри ядра, распространяющиеся в оболочке как поперечные и в ядре как продольные; |
| sS | - поперечные волны, отраженные от земной поверхности вблизи эпицентра; |
| PS, SP, PPS | - обменные волны, отраженные от земной поверхности; |
| sP, sPKP, sS | - обменные волны, отраженные от земной поверхности вблизи эпицентра; |
| PKS, SKP | - обменные волны, преломлённые ядром; |
| S _a | - поперечные волны, распространяющиеся в слое пониженной скорости, расположенному в верхних слоях оболочки; |
| L | - длинные волны, распространяющиеся по поверхности земли; |
| Q | - волны Лява; |
| R | - волны Релея; |
| L _g | - континентальная поверхность волна; |
| M | - максимум поверхностных волн; |
| i | - отчётливое вступление волны; |
| e | - неотчётливое вступление волны; |
| ei | - сильное, но плавное вступление волны; |
| cl | - следы волны, не поддающиеся обмеру; |
| Δ | - эпицентральное расстояние; |
| H | - глубина залегания очага; |
| O | - момент возникновения землетрясения; |
| A | - амплитуда колебания почвы в мм записи, приведенная к увеличению 1000; |
| T | - периоды колебаний почвы в секундах; |
| θ | - угол выхода сейсмической радиации; |
| M | - инструментальная интенсивность землетрясения; |
| CKD | - сейсмографы общего типа с продлённой характеристикой; |
| CD-1 | - сейсмографы длиннопериодные; |
| CX | - сейсмографы регионального типа (конструкции Д.А.Харина); |

ЧАСТЬ II
БЮЛЛЕТЕНЬ МИКРОСЕЙСМ
январь - декабрь
1970г.

ОБЪЯСНЕНИЕ ОБОЗНАЧЕНИЙ

- К - индекс характера микросейсм;
К=1 - микросейсмы в группах;
К=2 - непрерывные микросейсмы;
К=3 - неправильные микросейсмы;
... - невозможность измерения микросейсм;
tt - невозможность измерения микросейсм из-за землетрясения;
▼ - невозможность измерения микросейсм из-за порывов ветра;
0 - запись без микросейсм;
00 - очень слабые микросейсмы, амплитуда меньше 0,1 микрона;
T - период микросейсм в секундах;
A - максимальная амплитуда микросейсм в микронах.

МАТЕРИАЛЫ НАБЛЮДЕНИЙ

СЕЙСМИЧЕСКОЙ СТАНЦИИ "АПАТИТИ"
январь-декабрь 1970 г.

Ответственный за выпуск Г.Л.Панасенко

Подписано к печати 29.05.1975 г. Формат бумаги 60x84 I/8. Печатных листов 17.9
Уч.-изд.листов I5.73. Заказ № 204. Тираж 500 экз. ПН 00523. Цена 0.94 коп.

Отпечатано участком оперативной полиграфии
ордена Ленина Колского филиала им.С.М.Кирова АН СССР
